Special Biology Department
Seminar

Monday, June 27, 2016
Redfield Auditorium – 12:00 Noon

**Come In, We're Open: The Changing
Culture of Research**

Dr. Carly Strasser

**Program Officer, Data-Driven Discovery Initiative,
Gordon and Betty Moore Foundation**

We are hearing more about open: open data, open access, open source, open science, et cetera. More often, data sharing is requested or required by funders, journals, publishers, and institutions. What does this mean for how we do science? What are the implications for individual researchers? I will provide an overview of the trends towards openness in science, why this is a good thing, and how you can participate.
